

BUGFLOW

It gets them where they need to be

BUGFLOW has been specifically developed and designed by experienced IPM professionals for the uniform release and application of beneficial insects and mites in both greenhouse and field-grown crops.

The Makita blower models suitable for use: DUB 182/185

ADVANTAGES

1. Consistent & uniform application of beneficial mites and their feed on the crop for a distance of up to 4 m (13 feet).
2. Easily adjustable flow rate
3. High survival rate of beneficial mites during application
4. Saves time and labor in comparison to manual application
